Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Higgins shows the substrate with multiple layers, but the holes of each adjacent layer are not shifted. The holes of some adjacent layers are shifted with respect to each other so they do not overlap, but not for EACH of the adjacent layers. The Japanese reference shows holes staggered from layer to layer, but the major axis of the holes from layer to layer are rotated 90 degrees with respect to each other, while applicant's holes are not. The features of claims 2 & 3 were discussed, but no agreement was reached at this time.
